

ARRESTOR SWITCHBOARDS MADE BY FILKAB AD

FILKAB AD offers surge arrester switchboards with built-in safety devices and units used to prevent excessive high surge overvoltage in the power supply lines. The switchboards are designed and manufactured depending on the earthing system of the electric installation: TNC, TNS, and TT.

Elements for protection from overvoltage level I (class B) or elements for protection from overvoltage level II (class C) as well as a combination of the two types of protection can be built in the arrester switchboards. The elements used meet all the national and international standards covering overvoltage protection.
